

Lennox® mini-split systems offer these features:

Variable-capacity operation means unit runs at low most of the time, using only the amount of energy necessary to meet comfort need

Effortless control available in wireless remote or wall-mounted thermostat

Connect a mini-split outdoor unit to a ductless air handler to create a personalized heating and cooling solution

Seasonal Energy Efficiency Ratio (SEER2)

This rating determines an air conditioner or heat pump's efficiency. The higher the SEER2 rating, the more energy-efficient it is.

Heating Seasonal Performance Factor (HSPF2)

A heating efficiency rating for heat pumps. A higher-rated HSPF2 heat pump will result in less energy use and increased energy savings over the life of the system.

ENERGY STAR® Certified

HVAC equipment with the ENERGY STAR label meets or exceeds federal guidelines for energy-efficient performance.

Multi-Zone Comfort

One outdoor unit can support up to five indoor comfort zones, providing you with a customized and energy-efficient whole-home heating or cooling solution.

Multi-Position Ducted Air Handler Compatibility

By pairing either the MLB or MPC mini-split outdoor unit with the MMA mini-split multi-position ducted air handler, you get a quiet, compact home comfort solution that connects directly to your existing ductwork. This makes it ideal in situations where space is at a premium or noise restrictions are present.

How does single-stage, two-stage & variable-capacity work?

72°
Single-Stage

Unit is either on or off, creating wide temperature swings.

72°
Two-Stage

Unit runs at either low or high speed, using the lower speed 80% of the time.

72°
Variable-Capacity

Unit runs at low most of the time, using only the amount of energy necessary to meet comfort need.
